Embedded Development

We help design, build, test, implement, maintain and support embedded systems. Some of our services may cover software and firmware development for IoT devices and sensors, custom ROM development, integration of sensors, smart home and GPS, installing and configuring hardware.

Cross-platform Development

Save time and costs with hybrid apps that allow reusing code and function seamlessly across desktop, web, mobile platforms (both Android and iOS). We use Progressive Web Apps (PWAs), ReactNative, Angular, NativeScript, Cordova, Angular, and Ionic to deliver advanced functionality. To achieve feature-rich experience, we also apply plugins, native SDKs, wrappers, etc.

Software Quality Assurance

We help ensure that your software is high-performing, user-friendly and bug-free before its release. As part of our development process, we provide both manual and automated testing, relying on modern testing principles and techniques.

Custom Software Development

Relying on Agile and DevOps practices and our strong knowhow in Java, PHP, NodeJS, React Native, React, REST API, we have already delivered a range of custom native web, desktop, and mobile apps, custom plugins, etc. for both B2C and B2B companies. Among them are custom accounting software for financial services, warehouse, fleet, and inventory management, roadside car and traffic assistance, booking systems, food ordering, BI analytics and reporting, and more.

Infrastructure Development

Achieve higher cost-efficiency and better operational agility with a flexible and scalable infrastructure. Some of our services comprise:

- Infrastructure design and implementation
- Migration (servers, data centers, on-prem to cloud, cloud to cloud)
- Infrastructure modernization from monolith to microservices
- Software upgrade and infrastructure scaling
- DevOps-as-a-Service (CI/CD, cloud management, container orchestration, etc.)

Mobile Apps Development

We provide end-to-end mobile development services starting from the solution ideation, design, architecture, and PoC to its MVP, further full-scale app development, implementation, maintenance, and 24/7 support. One Logic Soft is an expert in cross-platform mobile apps focused on transforming customer experience through integration of AI, cloud, AR/VR, IoT, and other innovative technologies.

IOT AND SMART SENSORS

Mostly custom solutions for smart logistics, retail, automotive, manufacturing industries with insightful data at hand.

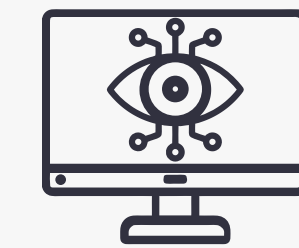

CLOUD

Public, private, hybrid, and multi-cloud development, migration, and management.

AI AND ML

AI-powered web and mobile apps for both corporate and consumer needs like anomaly detection, advanced analytics, intelligent assistants, etc.

COMPUTER VISION

Enhanced data collection and automated monitoring within tracking, detection, recognition, counting, and classification solutions.

AR/VR

Dynamic and interactive apps that deliver exceptional personalized experience and help customers make their decisions faster.

PREDICTIVE ANALYTICS

Making precise sales, churn, quality, and consumer behavior predictions, enabling proactive maintenance, fraud detection, and more.

How to Expand Your Tech Expertise and a Team__

Use our 9-Step Recruiting Program to expand your team or have a dedicated team of developers, QA testers, DevOps engineers, or any other team member to fit your specific business needs and project requirements.

STEPS

Data & Gaps Analysis

- 👉 Define project and business needs
- 👉 Precise, customized criteria to a candidate

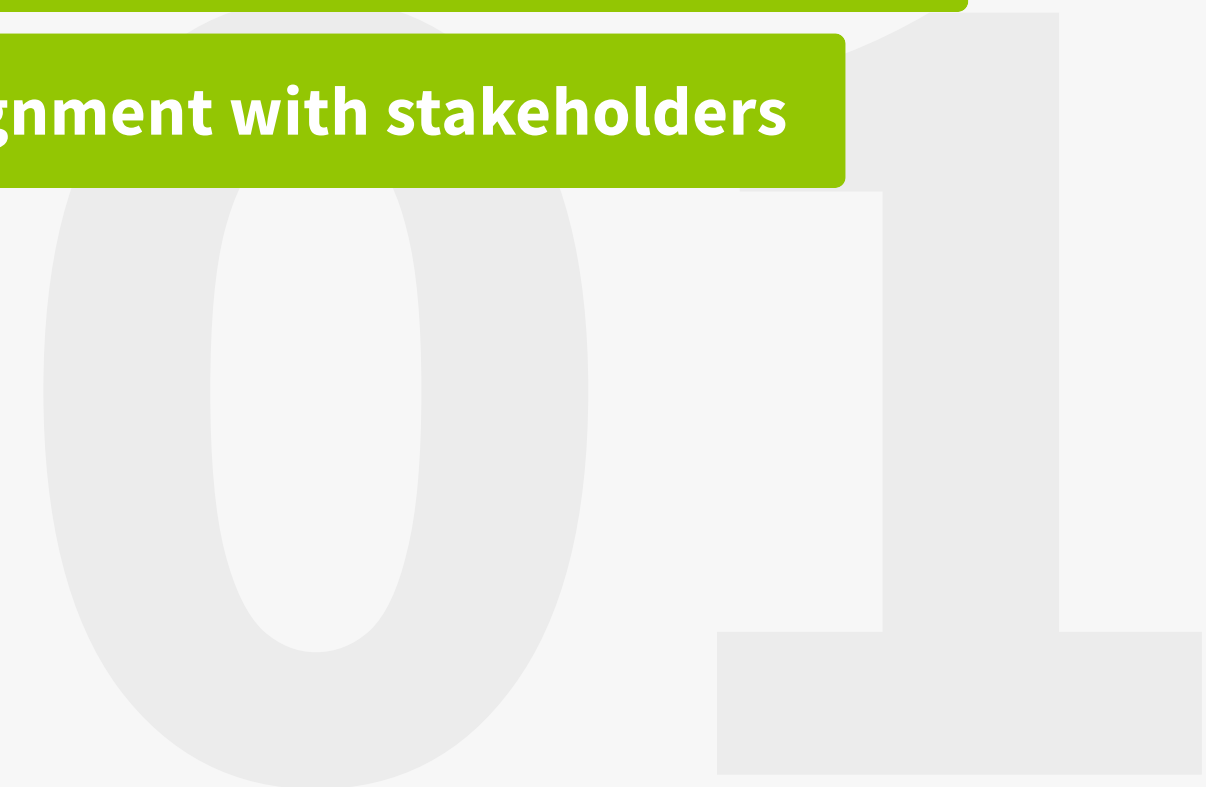

At the initial stage, we study your team, project, targeted technologies, the company's culture and processes. We assess the expectations and requirements of all involved parties to a perfect fit.

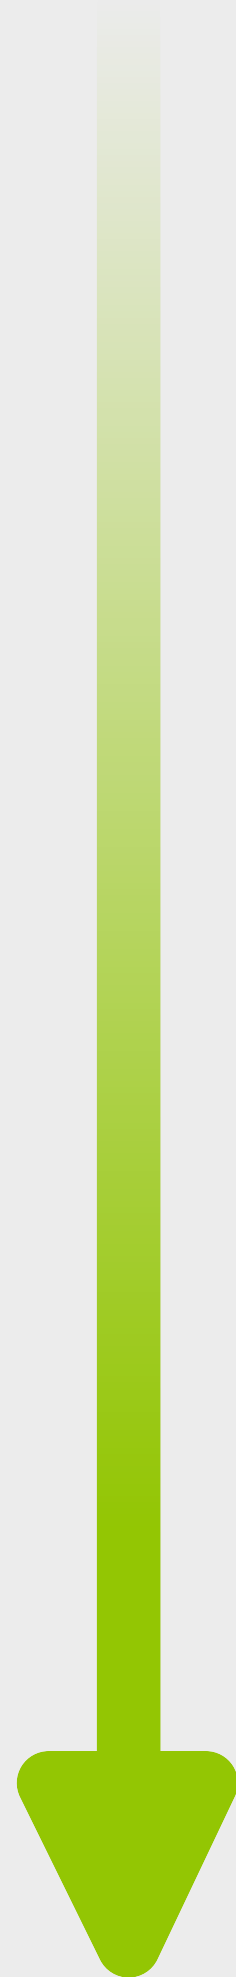

Workforce gaps analysis

Information gathering and analysis

Company values overview

Alignment with stakeholders

HR
manager

Assigning a Dedicated Recruiter

- 👉 Select a recruiter with a matching expertise
- 👉 A dedicated recruiter for the project

After studying our customer's needs, we match a dedicated recruiter with the project. A committed talent expert makes a thorough candidate search, guides you through a pool of matching candidates, and helps you select an ultimate match.

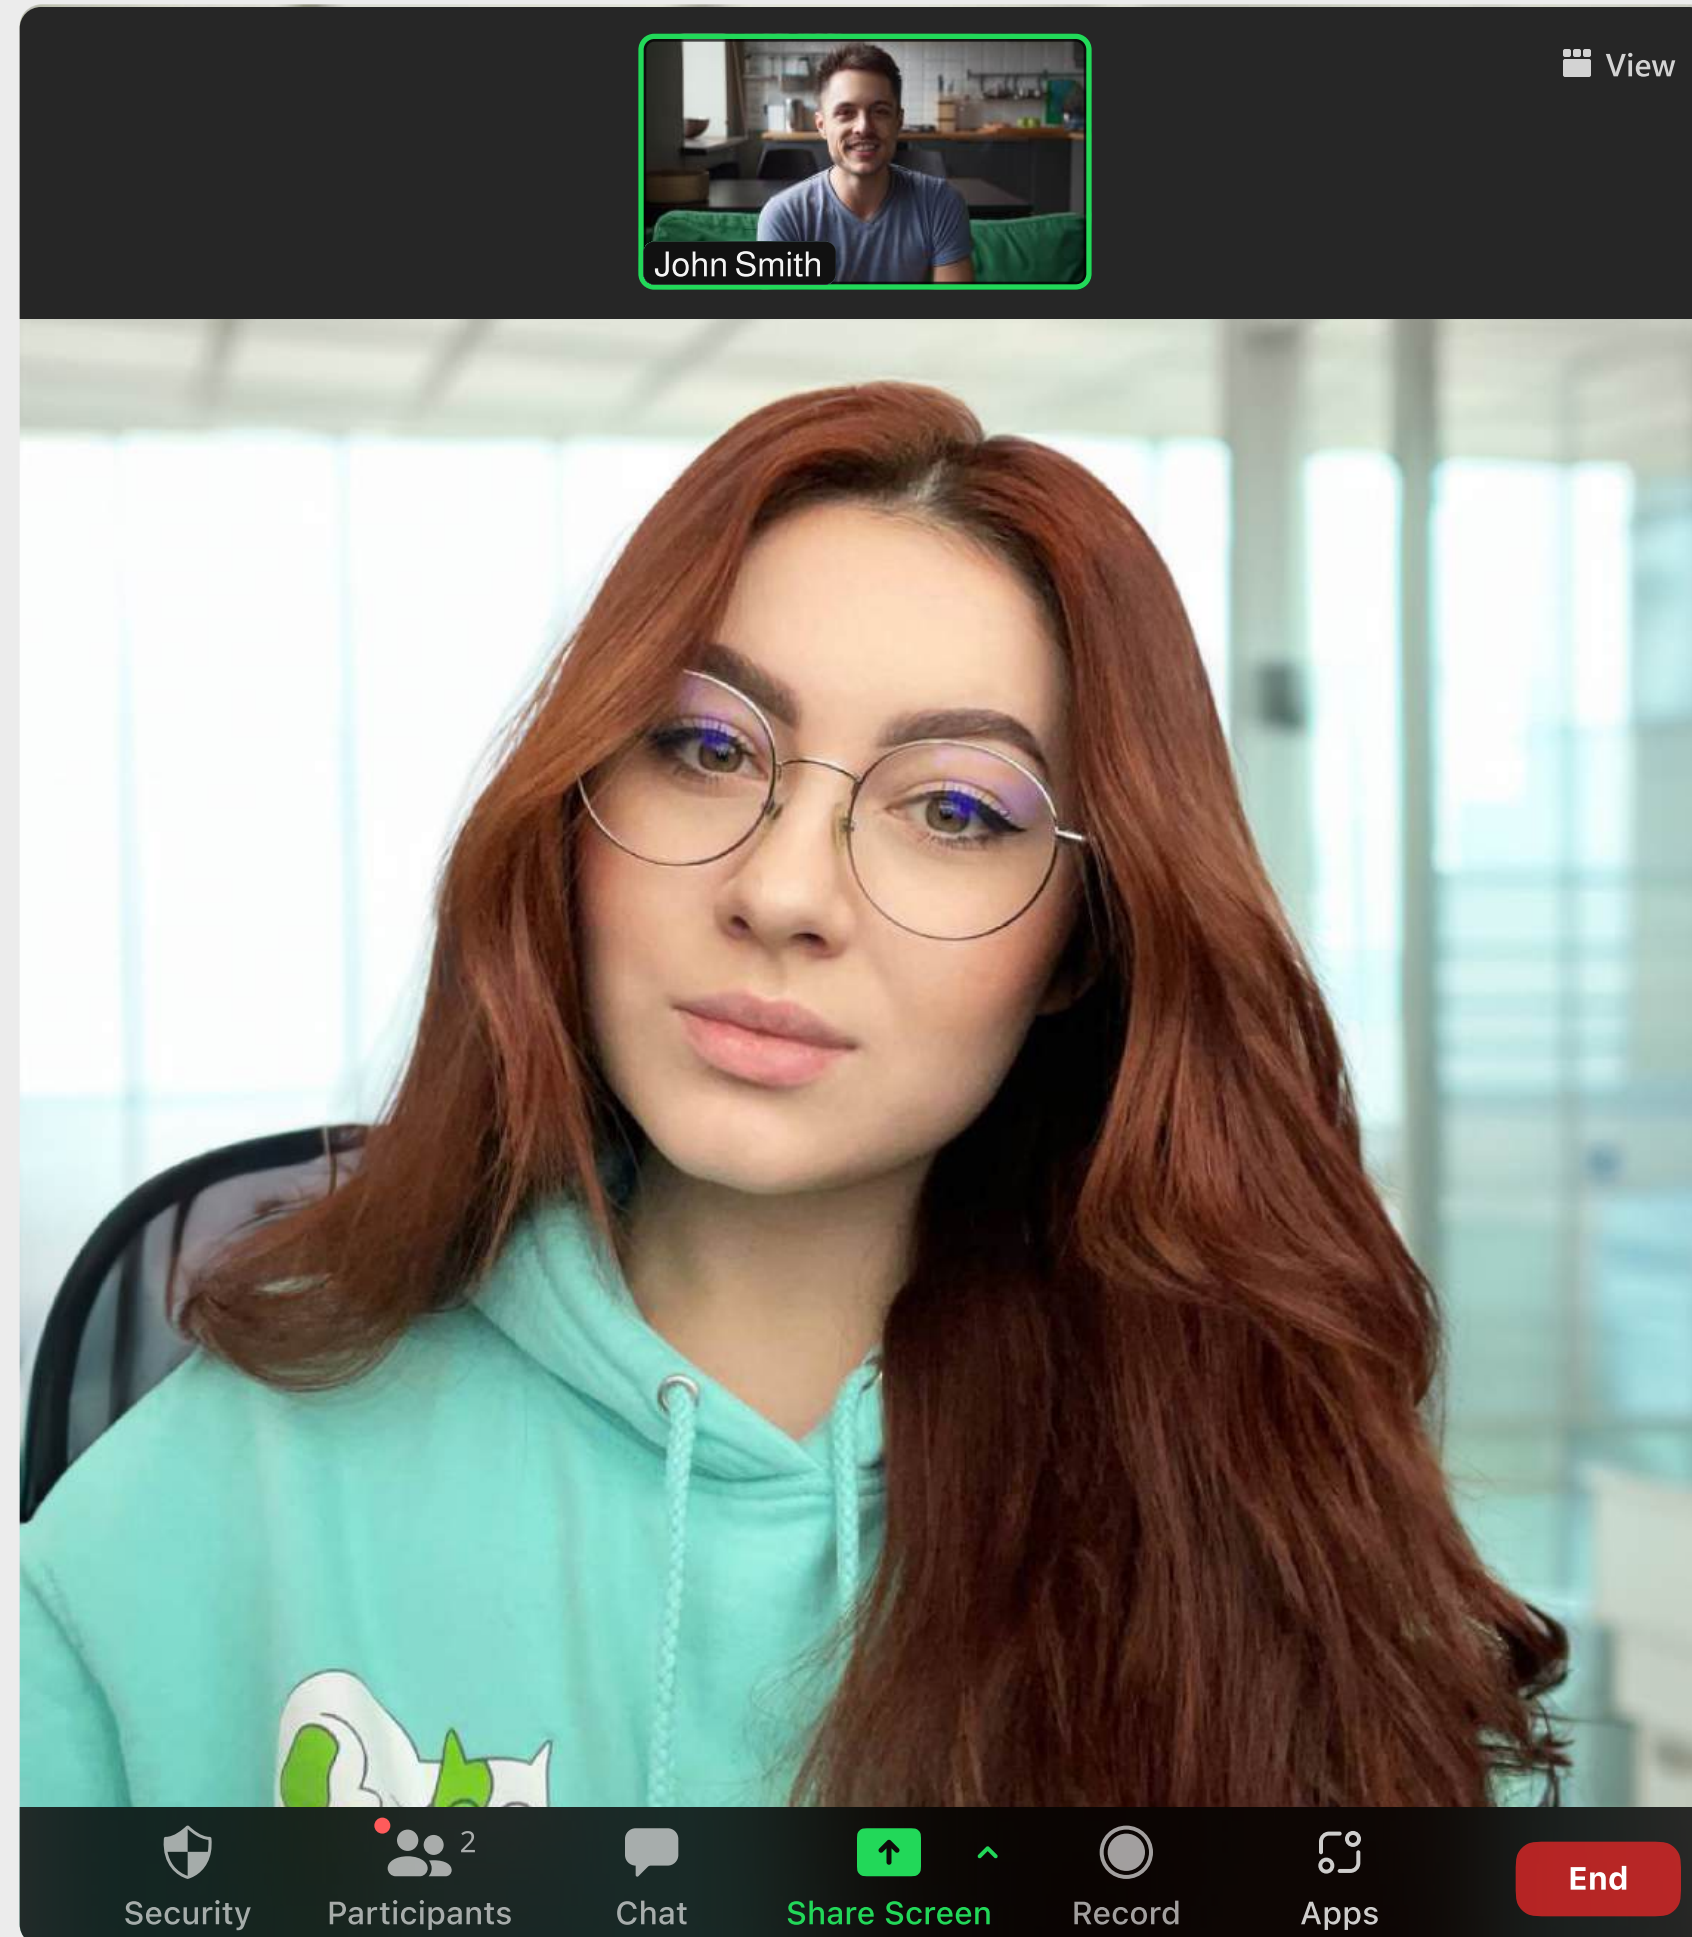

Curated talent pool of qualified candidates

Tailored expertise

Personalized recruitment process

Time and resource efficiency

02

Candidate Sourcing

- 👉 Candidate data (roles to cover, skills, experience, etc.)
- 👉 Job description and candidate profile

We carry out a detailed search of candidates using our recruiting channels and a proprietary database of developers (over 4000). We also rely on 7-year recruitment experience in 17 countries.

Job postings across reliable platforms

A wide range of referral networks

Accurate search of applicants

Profile of an ideal candidate

03

Candidate Evaluation

- 👉 Criteria, job description, profile
- 👉 A shortlist of candidates ready for technical testing

Through a comprehensive screening process, we filter applicants based on the defined criteria using both manual and automated tools. We evaluate candidates, assessing their skills, competencies, and cultural fit.

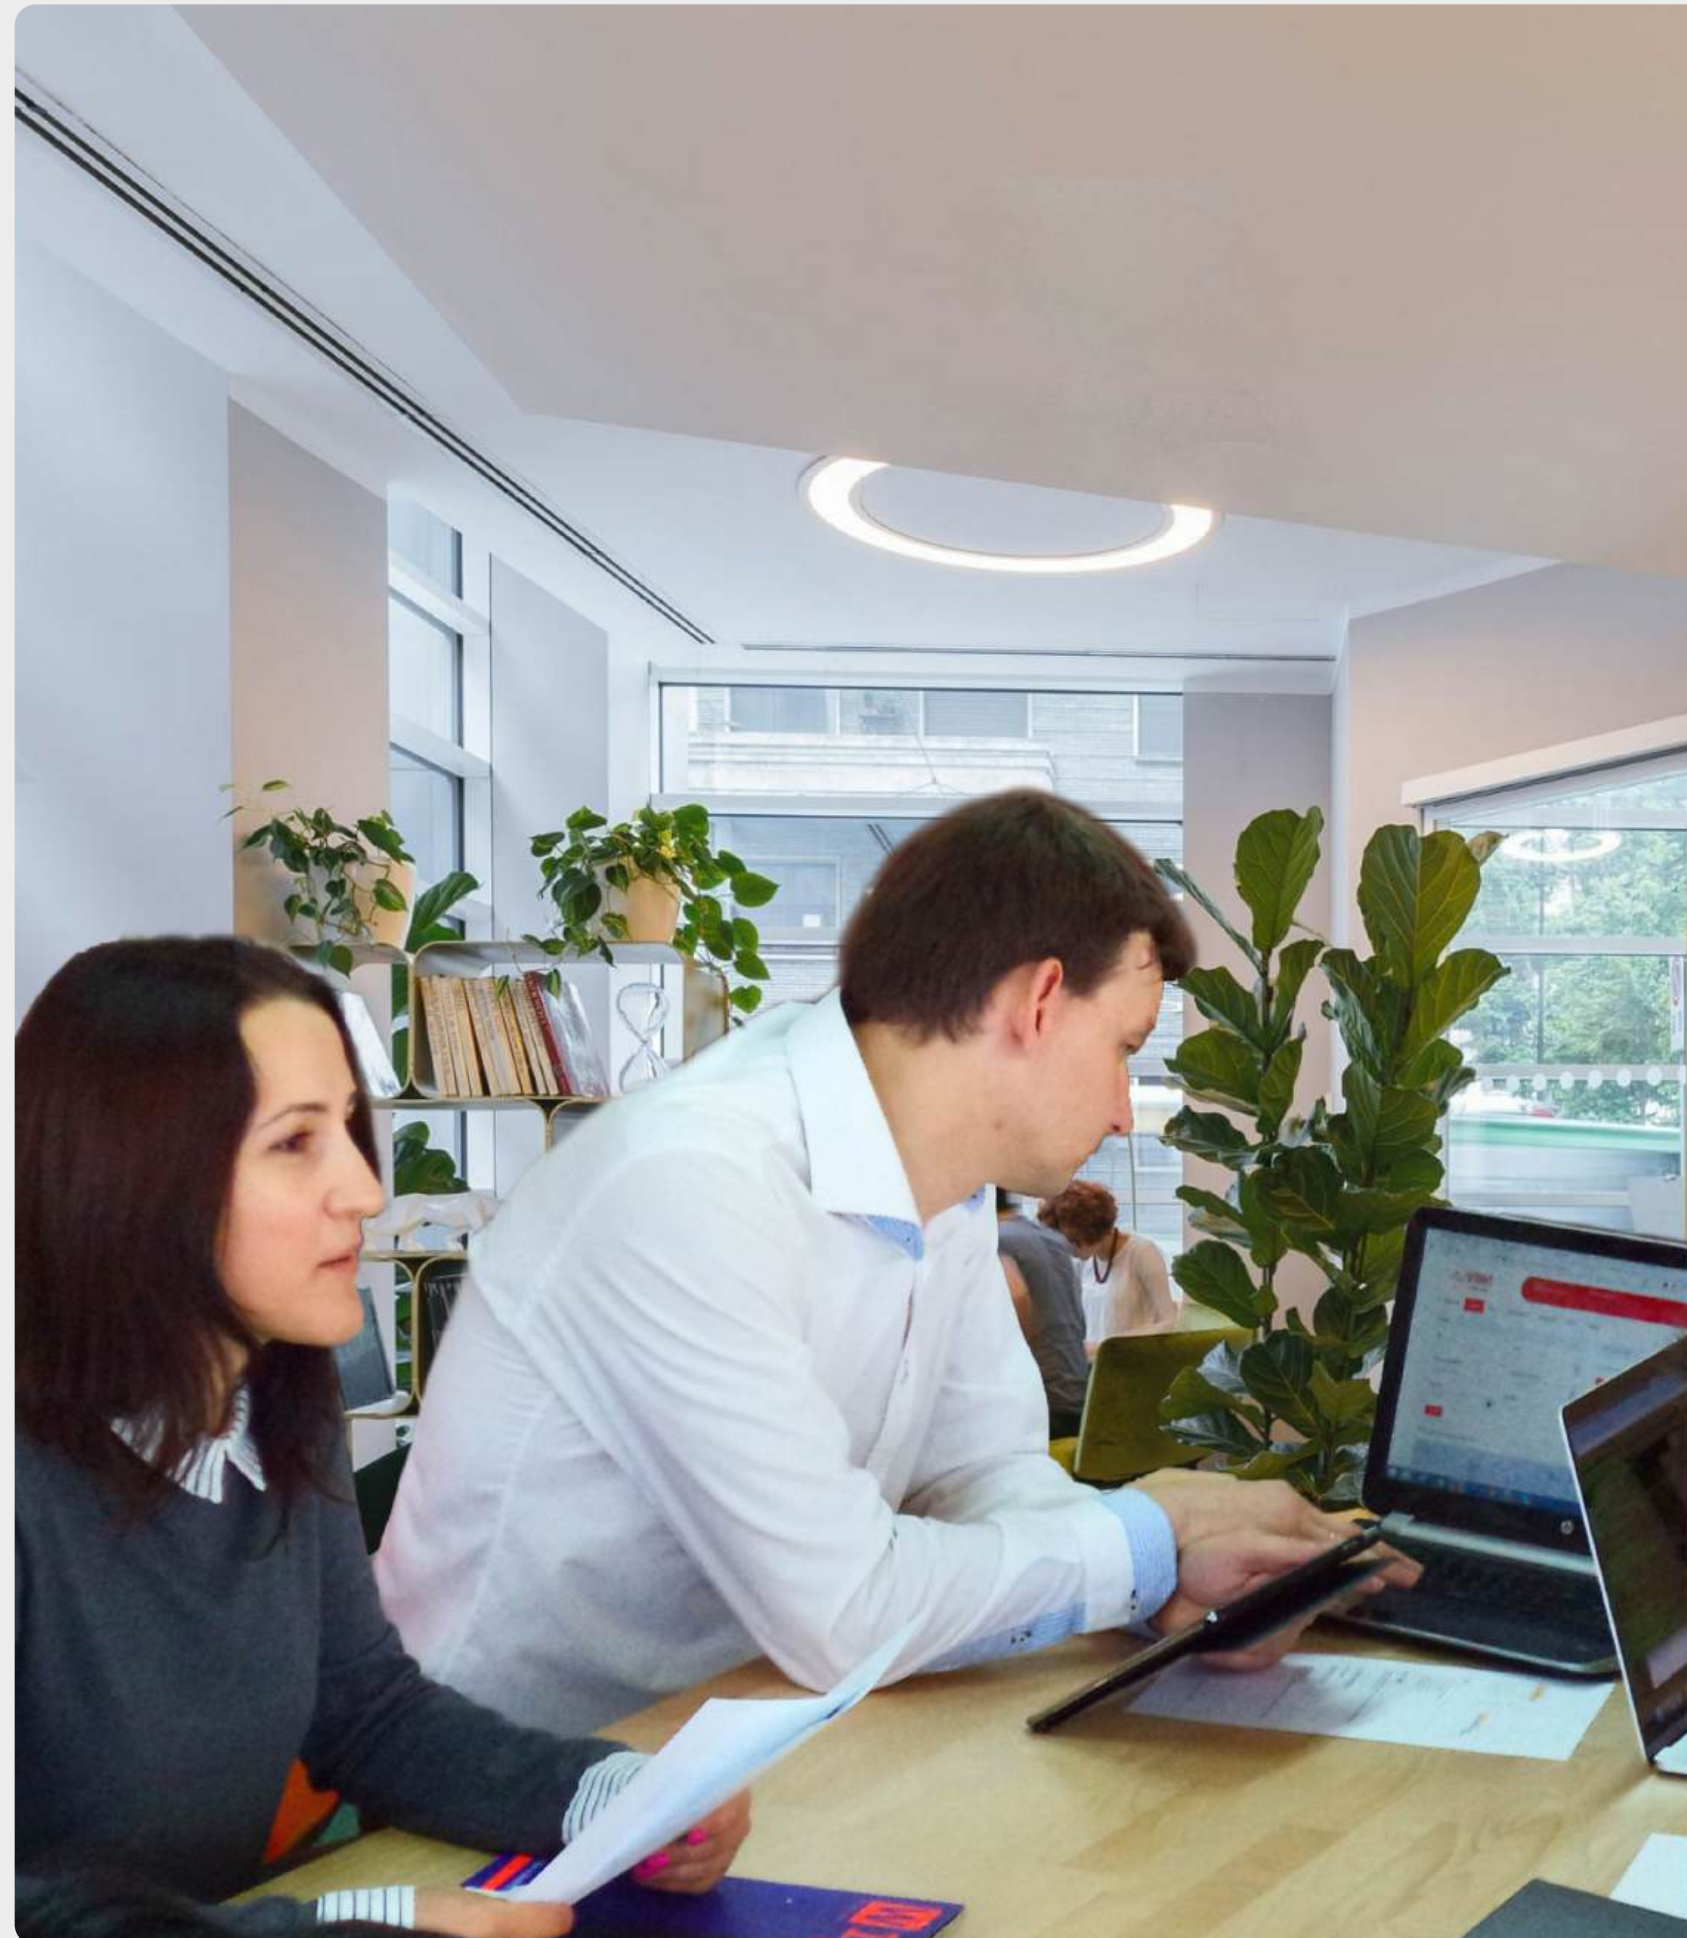

Thorough skills and experience assessment

HR pre-screening and English proficiency testing

Evaluation of professional growth potential

Behavioral assessment

Well-shortlisted candidates

04

Technical Interview

- 👉 Technical criteria, standards, interview score
- 👉 Ranking top candidates for the position

Our professional team of IT experts participates in technical evaluation of candidates by conducting technical interviews, live coding, and providing their detailed review and feedback.

A client's experts can also take part in the technical interview.

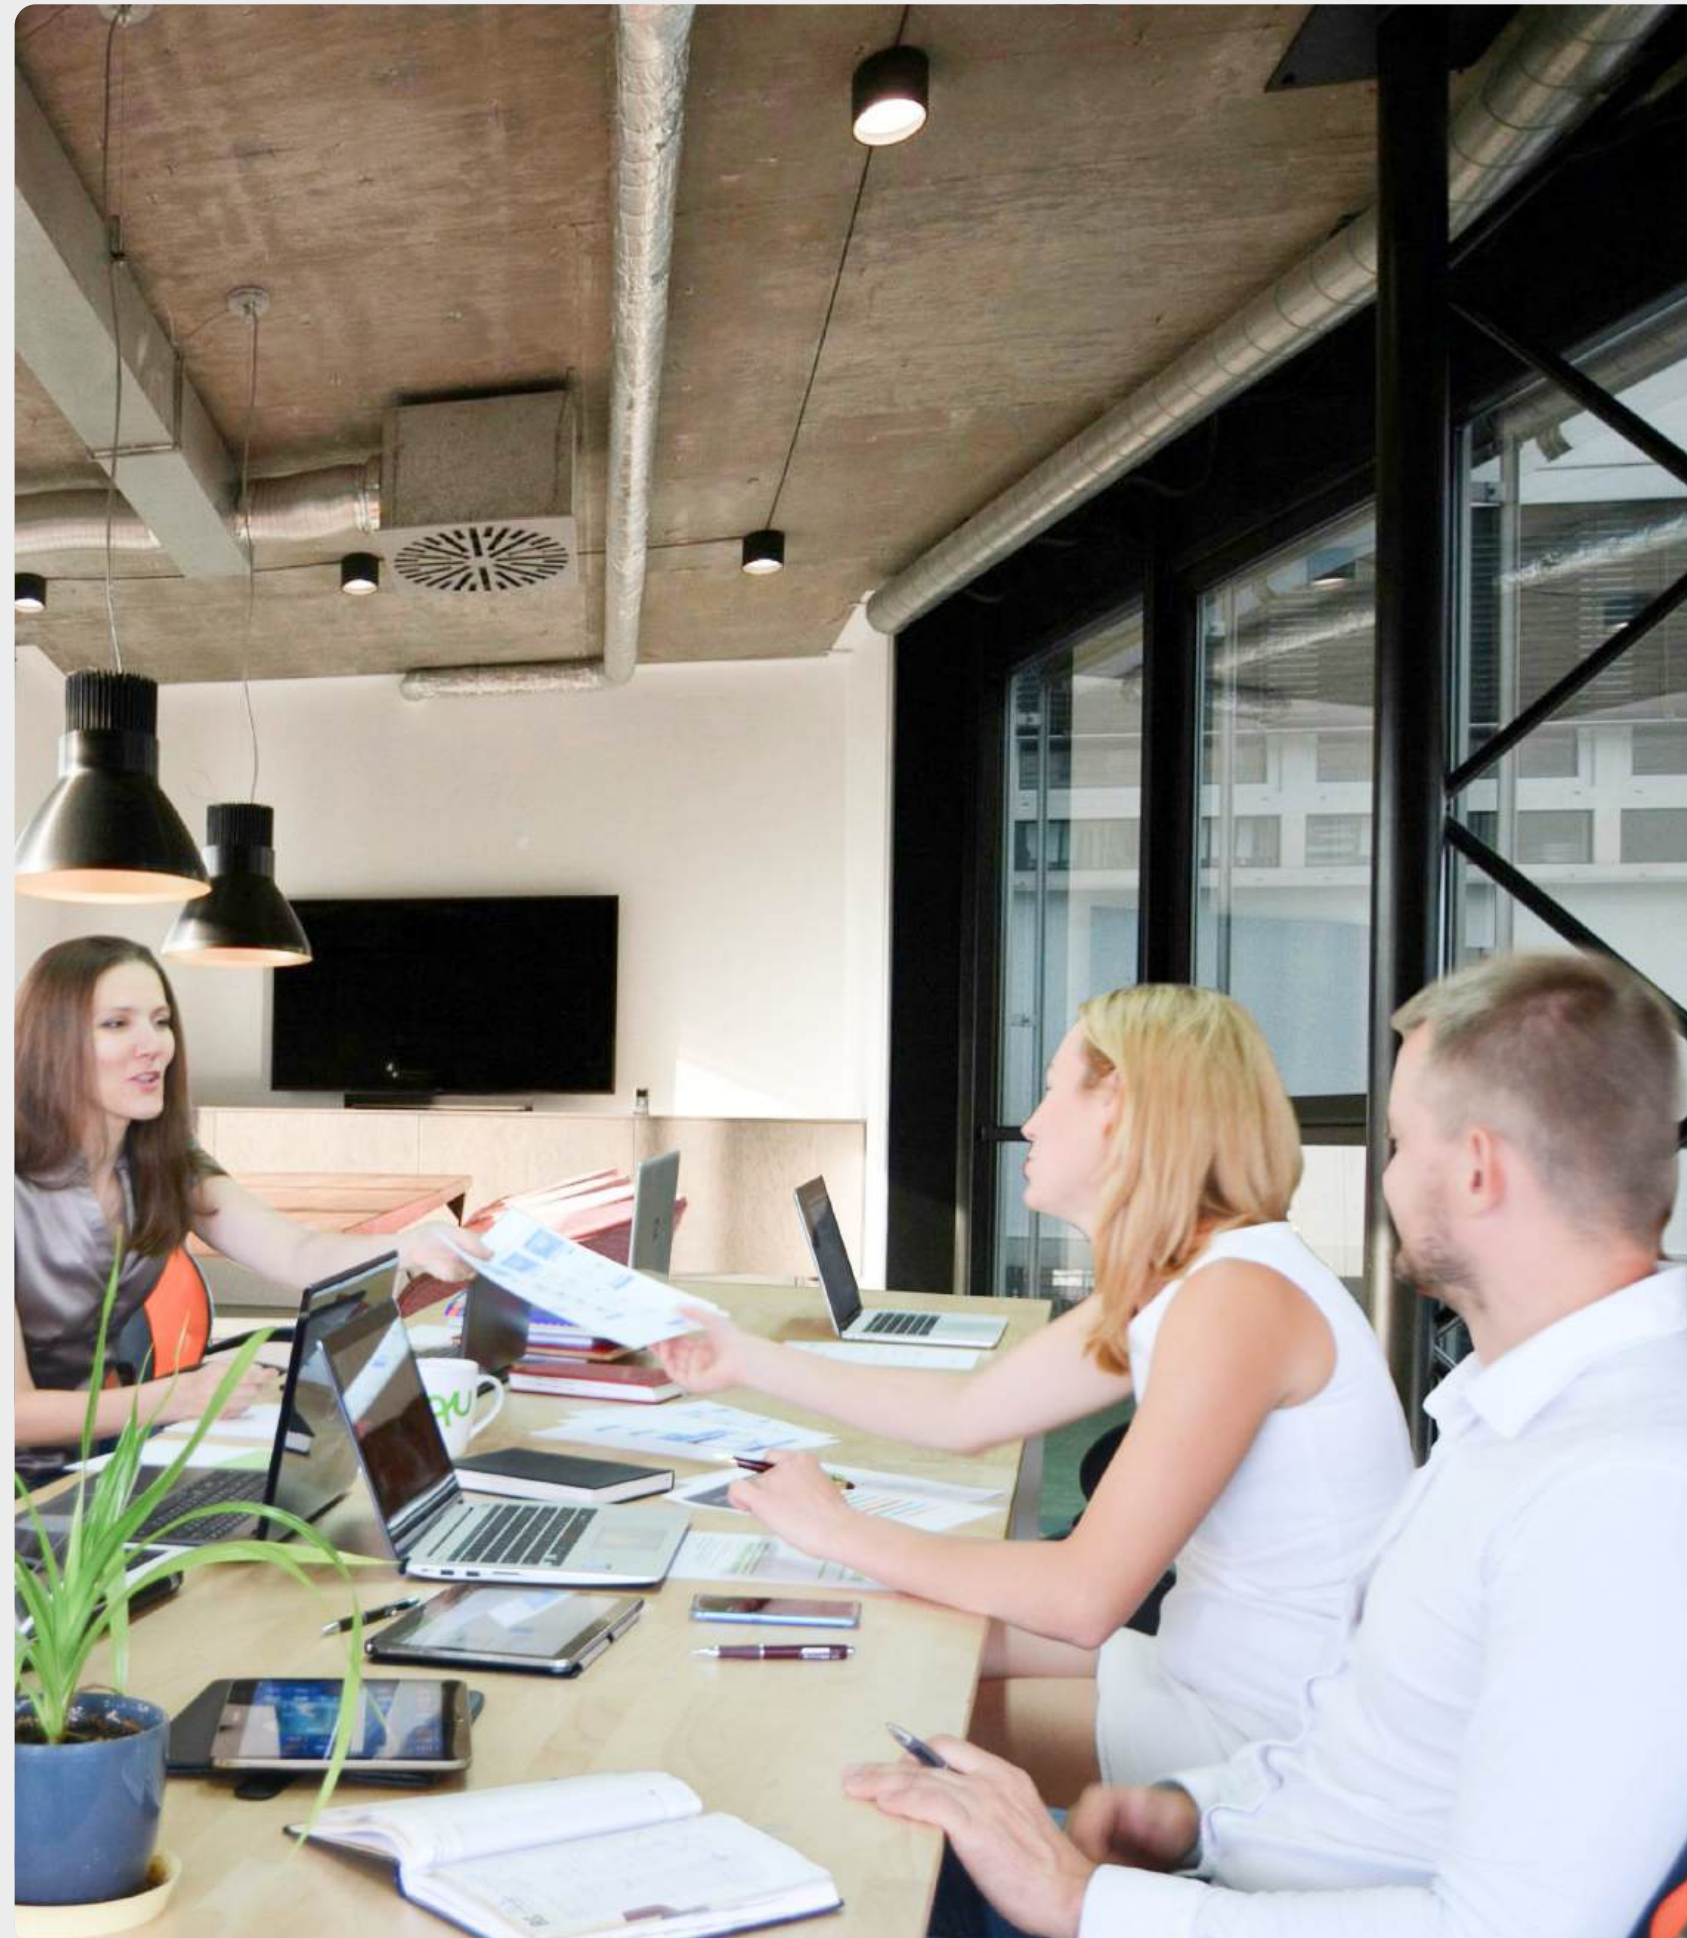

Professional assessment

Technical testing on our side

Live coding

Problem-solving techniques

05

Job Offer

- 👉 Candidate is selected
- 👉 Create offer, negotiate compensation, start days

We prepare all necessary documents, like contracts, NDAs, confirm the start day, probation period, responsibilities

Preparation of contracts, agreements

Clear transition process

06

Onboarding

- 👉 Credentials and equipment essentials
- 👉 All-equipped workplace

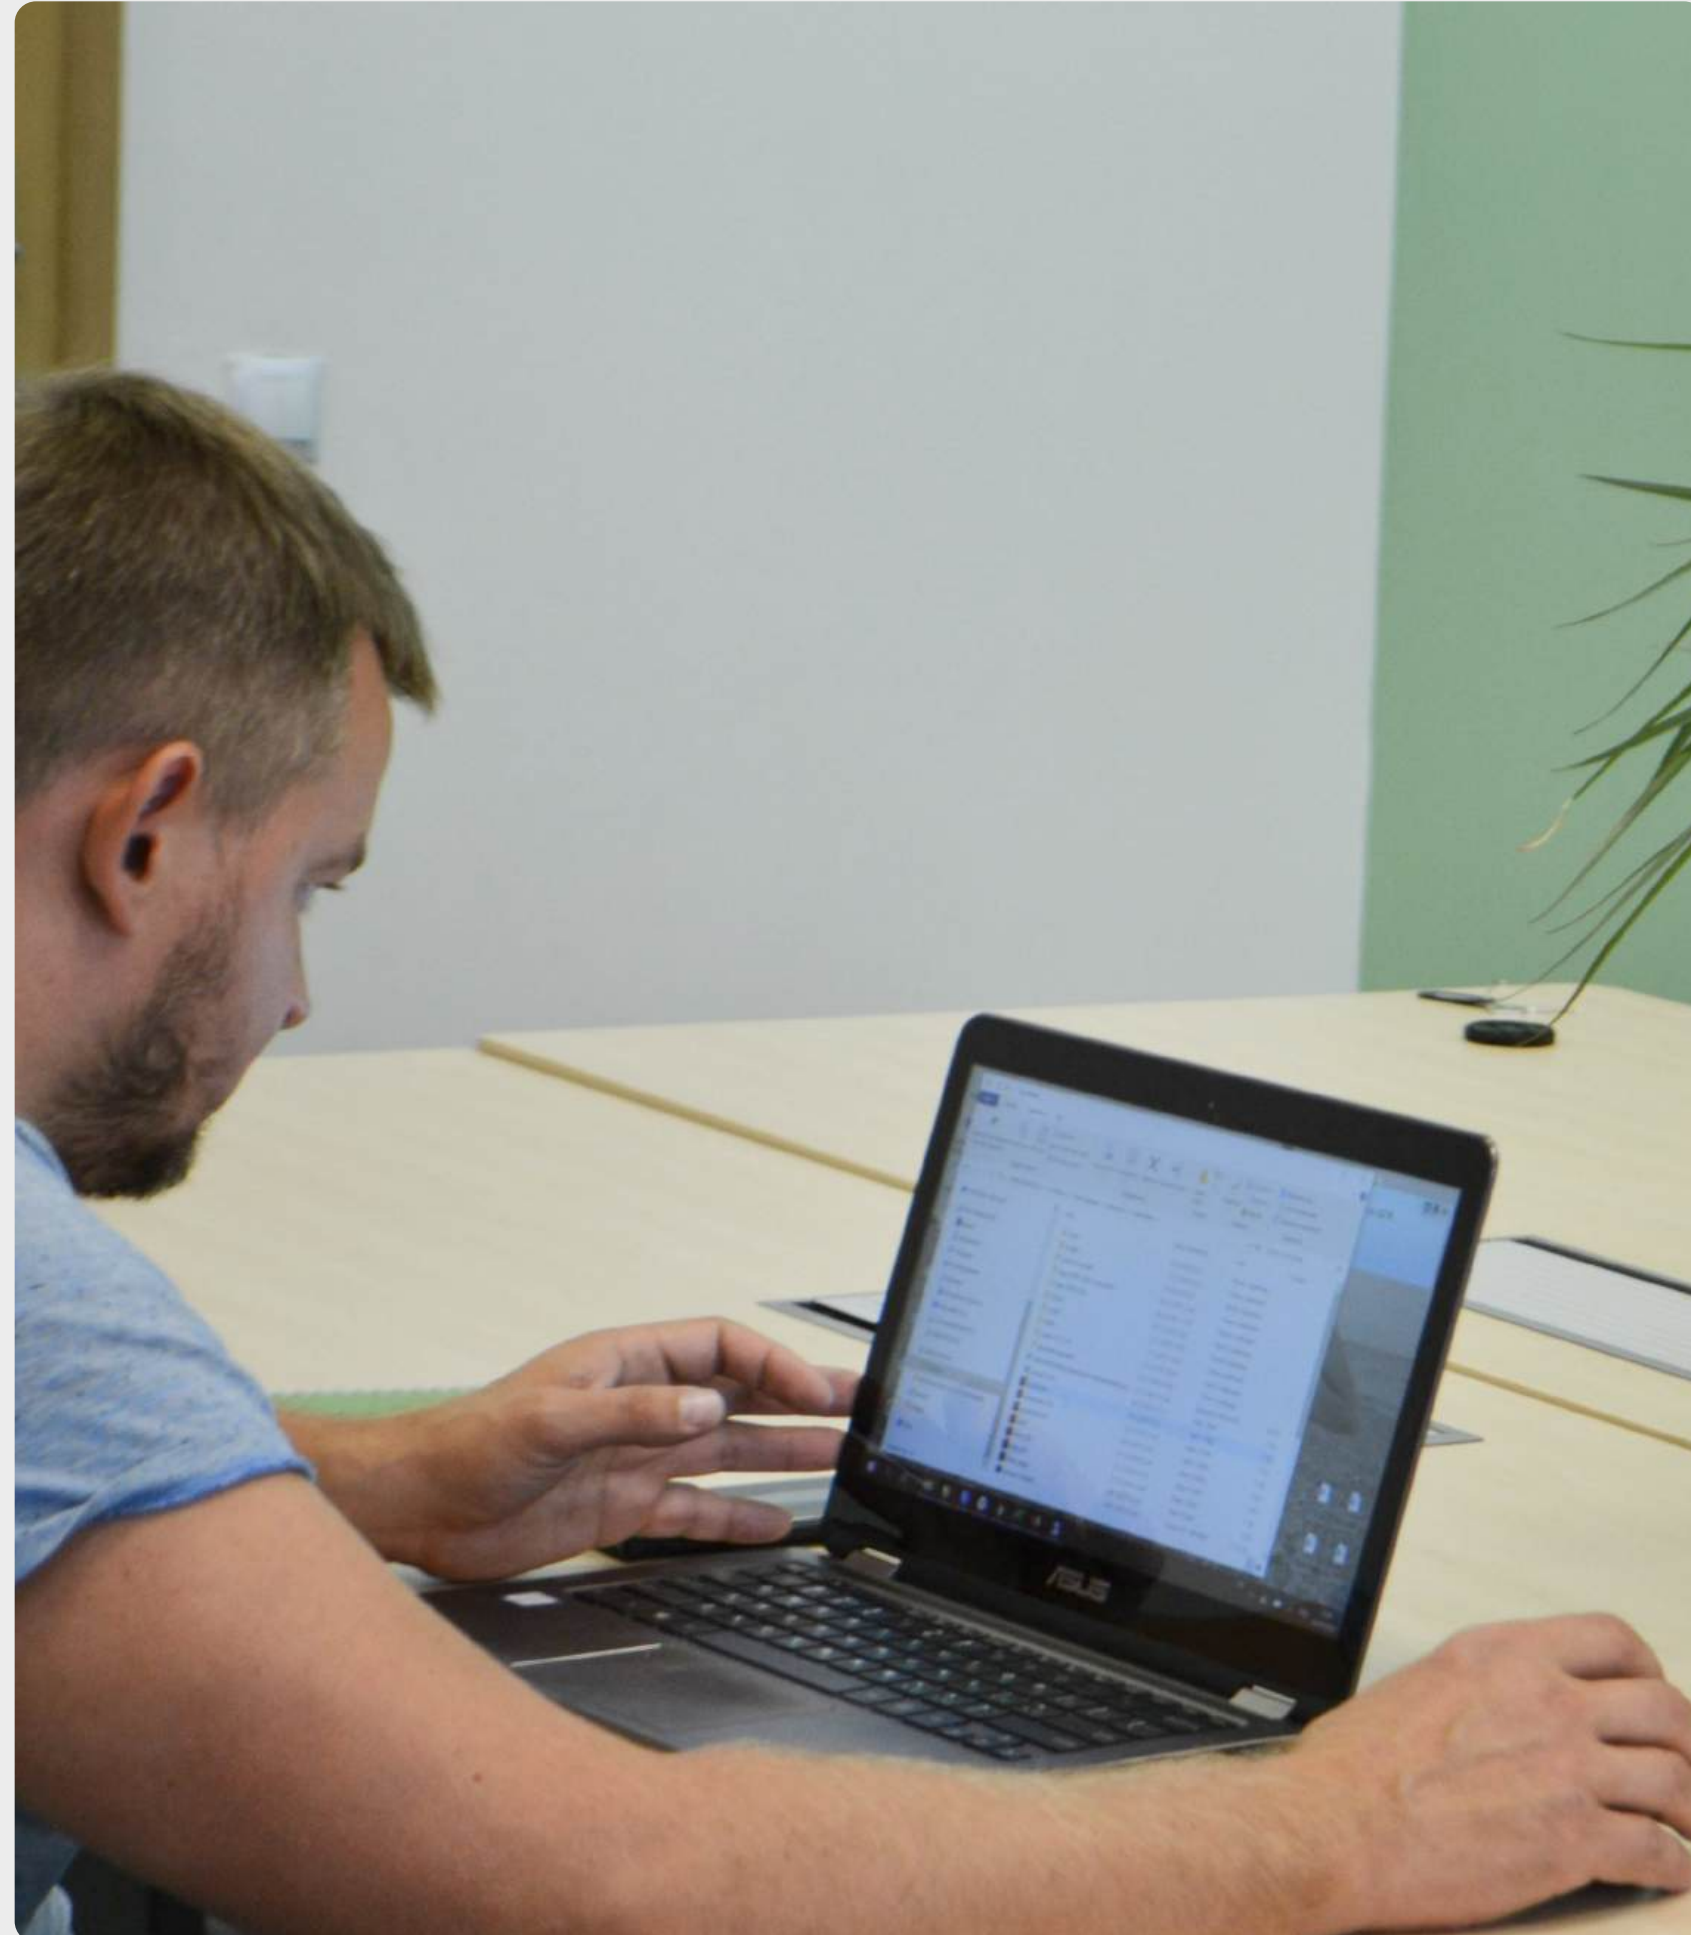

When onboarding, we try creating comfortable work environment by equipping a new employee with necessary hardware, software, and credentials

Comprehensive approach

Seamless integration of a new employee

Well-equipped workplace

07

Security & Compliance

- 👉 Terms and conditions, policies
- 👉 Secure workplace

To ensure security of a digital workplace and compliance with your company's policies, we prepare contracts, security training, documentation, etc.

Compliance-first approach

Clearly formulated policies

Digitally secure workplace

08

Fostering Employee Loyalty

- 👉 Create loyalty program
- 👉 Ensure high commitment

We build loyalty having set exceptional employment programs and fostering commitment to the project, its goals, and the company's values

Dedicated loyalty program

Lowest staff turnover rate

Exceptional team dedication
